# FORWARD ARTILLERY OBSERVERS TRAINING SIMULATOR

In the field, it is expensive and dangerous to train forward artillery observers, infantry and armored unit commanders with artillery. Simulation increases training efficiency. ETC-PZL Aerospace Industries has developed a flexible, portable, cost-effective simulator for this purpose.

## TRAINING OPTIONS:

- Single observer training
- Multiple observer team training
- Training infantry and armored units commanders in coordination with artillery

## SYSTEM FEATURES :

- Generic or geographically-specific 3D terrain database
- Map creation
- Map symbols according to APP-6A
- Customized range of targets (vehicles, aircraft, infrastructure objects, etc.)
- Levels of target destruction
- Customized range of weapon types (mortars, howitzers, multiple rocket systems)
- Customized range of ammunition types
- Wide spectrum of climatic and meteorological conditions
- Customer-defined target, weapon systems and ammunition
- Multiple fire plans (single gun, battery, battalion, regiment)

## OPTIONS:

- Forward air controller/close air support
- Close loop training
- Joint operations training (infantry, armored units, engineering units, air support)
- Naval scenarios
- Simulated selected FAO's recognition and communication systems
- HLA external transmission

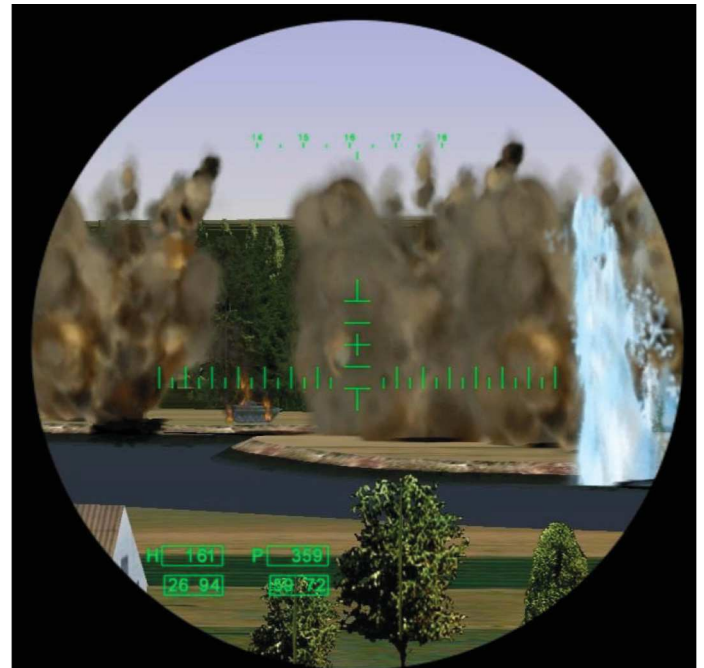

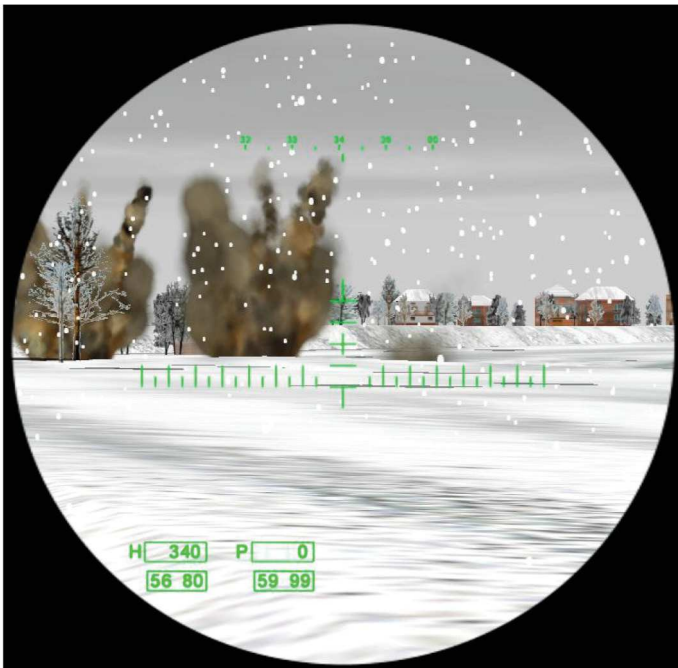

**The simulator hardware and software is based on standard COTS elements.**
